

Special PRESS FEEDS

TYPICAL EXAMPLE OF MINSTER PRESS VERSATILITY

Here you see a 600 ton Minster knuckle-joint press equipped with a special chain feed . . . enabling Delco Products, Dayton, Ohio, to pierce and coin drop forgings (cam rockers for shock absorbers) at a rate up to 72 per minute. Tolerances of $\pm .0015$ are being maintained with resulting elimination of grinding operations for sizing.

Ask Minster engineers to explain the advantages of such special feeds on your next Minster presses. Chain feeds, roll feeds, dial feeds . . . all are available to help you increase production and produce greater accuracy.
