

*Automatic production
at Parker Pen Company
cuts costs - improves quality*

The Parker Pen Company, Janesville, Wisconsin, has gained substantial savings and better part quality by switching to automatic production of pen and pencil clips with progressive dies in a Minster Piece-Maker press. ■ Parker's trademark, the distinctive arrow design clips, are precision notched, perforated, coined, drawn, balled and blanked, two at a time, from strip stock in the high speed Minster 75 ton P2 press. ■ Costs are down, quality improved, with a minimum of scrap and reduced inventory and handling requirements. ■ Minster offers a complete range of press types and sizes (16-800 tons) for profitable automatic production. May we show you how a "job-tailored" Minster pays for itself? The Minster Machine Company, Minster, Ohio, U.S.A.
