For a Popcorn Hungry Public

Down Texas way, the T & C Company of Grand Prairie is setting the popcorn business on its ear with their unusual new mechanical vender. A new idea, a new business . . . and once again, behind the scenes stand Minster presses.

Two big Series 50, 290 ton Minsters stamp the larger parts . . . the bases, mouldings, waste chutes, panels, doors, coin boxes, and other important parts. Every 3½ minutes a machine hops off the assembly line and keeping this line supplied with stamped parts are the two Minster presses illustrated above.

You find Minster an important cog, not only in new industry, but in old as well. Versatility, design excellence, and a complete range of types and sizes up to 2,000 tons have produced a line with many outstanding advantages.
