*In addition to the 600 ton Heavy Duty Blanking Press illustrated above, Minster also makes presses of this type in 200, 400, and 800 ton capacities.*

**T**HE famous built-in stamina of White trucks didn't just happen.

It was born—created on drafting boards and in every corner of the vast White plant. And once again, behind the finished product stand Minster Presses.

The Minster you see here blanks and forms cross members for frames. It's a 600 ton model and yet its operation speed is up to 40 a minute, much higher than generally considered possible for presses of this capacity. It's so fast, in fact, that it's specially built to receive automatic feeding should White later desire to add it.

This Minster press is designed to handle unbalanced or unequally distributed loads. It has twin connections between full eccentric shaft and slide, the latter guided by six adjustable gibs.

Keep in mind that Minster presses offer unusual versatility. The line is complete, our engineers are always ready to work with you.
